Kansas City’s most exciting K-12 STEM competition!
The drive to strengthen communities is the heartbeat of Burns & McDonnell, in our work and with the Burns & McDonnell Foundation. Over the past few years, we’ve invested more than $7 million in grant programs that support STEM (science, technology, engineering and math) education.

Why do we care so much about this cause? Every day, our employee-owners rely on STEM skills, passion and a lifelong curiosity to change the world. The opportunity to light the same spark and build the same foundation in kids? Well, that’s pretty amazing.

We believe the United States should be a place where kids engineer a revolutionary water filtration system or design a building with zero environmental impact. We believe in empowering the next generation of STEM professionals to do more than just use apps, but to design them. We believe it’s our responsibility to help these kids change the world.

Median earnings for STEM jobs are DOUBLE the earnings for non-STEM jobs. 85% of students will work jobs NOT YET imagined. 13% increase in STEM jobs from 2017 to 2027.
Our leaders create a gigantic idea: a competition to inspire kids to think big about STEM in support of Science City.

Battle of the Brains kicks off with more than 560 entries, representing the big ideas of 2,500 students.

Science City earns the prestigious Roy L. Shafer Leading Edge Award for Visitor Experience from the Association of Science-Technology Centers.

We shake things up for the third competition cycle with a new challenge — to build Science City’s first outdoor exhibit, generating proposals from 5,300 students.

At another exciting ceremony, schools receive $155,000-plus in grants and Mason Elementary is awarded the top prize.

Attendance at Science City has increased 84% since the competition began.

We debut the latest million-dollar exhibit — a huge outdoor science playground called Simple Machines at Play.

So far, more than nearly 20,000 students (and counting) have participated in the competition — and hundreds of thousands more have visited the resulting exhibits.
November 2011
After months of hard work, the top 20 schools receive $155,000-plus in grants — and Olathe North is awarded the Grand Prize for Unplugged.

March 2013
After working with students, our team of architects, engineers and construction managers unveils The Science of Energy featuring Unplugged, the first million-dollar exhibit.

September 2013
The second competition cycle attracts more participation than ever, with 3,500 students from 50 school districts submitting 501 big ideas.

December 2013
Science City announces a double-digit growth in visitors.

December 2014
Our team works with the winning students to open the latest exhibits — Genetics: Unlock the Code and Every Last Drop.

November 2013
The top 20 schools get $155,000-plus in grants and we shock the crowd by announcing the construction of TWO exhibits — the entries from Leawood Elementary and Olathe North.

November 2017
Student’s from Grandview’s CAIR-Focus Program win the top prize and — along with the top 20 schools — earn $155,000-plus in grants for STEM education.

January 2019
Science City is named “Favorite Family-Friendly Attraction” by Visit KC.

March 2019
Another million-dollar exhibit — The Amazing Brain — debuts as the largest indoor exhibit at Science City.
INSPIRED BY KIDS, built by Burns & McDonnell

A science center thrives because of inviting exhibits, but also because it's valued as a community amenity. A beneficial cycle begins with repeat attendance and volunteer support, providing financial support that pours back into the center. At Science City, the Burns & McDonnell Foundation is giving that beneficial process a kick-start with Battle of the Brains, a multimillion-dollar grant program.

Burns & McDonnell Battle of the Brains is Kansas City's most exciting K-12 STEM competition, with a premise that's wholly unique. Metro area schools earn a piece of the $155,000-plus grant for STEM education by dreaming up an exhibit concept for Science City — and one school sees its idea come to life in a $1 million exhibit. The benefit to the community is twofold: promoting STEM education and adding new innovative exhibits to Science City.

So far, more than nearly 20,000 students in 50 school districts have benefited from this immersive educational opportunity. The competition has produced five interactive exhibits: The Science of Energy, Genetics: Unlock the Code, Every Last Drop, Simple Machines at Play and The Amazing Brain. The Burns & McDonnell Foundation has also invested in two additional exhibits — Science on a Sphere and the Burns & McDonnell Engineerium.

These additions have made a difference at Science City, helping to boost attendance by 84% and encouraging thousands of visitors each year to explore STEM topics. Students and teachers are sharing rave reviews about Science City as a place where learning and fun happen in equal measure.
THE AMAZING BRAIN explores your body’s command center — where you form memories, feel emotions, learn new things and so much more. In this vibrant, active and thought-provoking exhibit, you’ll balance, react, sniff, hang, tie, lie, shock, press and play — all to gain a better understanding of the magnificent, three-pound organ in your skull.

- **Memory Match** a colorful, fast-paced demonstration of your brain calling your memory network into action. Alone or with a group, see how well you can follow a racing pattern of lights and sounds until you make a mistake or win.

- Explore your brain’s sound system in **Listen Up**, where playing with a series of audio illusions lets you test out what happens when sound waves travel through your ear canals to your brain.

- Are you thinking about your heart beating? Or breathing, swallowing or blinking? Probably not. Luckily your brainstem is always on the job, handling the automatic functions your body performs to stay alive. **Be The Brainstem** and see how well you can keep up!

- In **Upside Down And Backward**, flip your view and tie a shoe. Sound easy? Not when there’s a mirror disrupting the complicated job of processing sight.

- In the **Endurance Test**, hang onto a bar as long as you can to see if physical stamina is all in your mind. Can you train your brain so your body performs better? Some scientists believe your brain unconsciously limits how hard you can push yourself to protect your muscles from damage.

- **Think Fast** measures your reaction time: how long it takes for your brain to receive a message from your ears and then send one to your muscles. Practice makes perfect — the more times you do it, the faster your reaction time will be.

- Optical illusions are confusing and captivating. With a fan and a strobe light, **Freeze Frame** demonstrates how your brain can be tricked into seeing something different from reality.

- **Name That Color**. Simple, right? It isn’t when your brain is struggling not to read the colors. Called the “Stroop effect” after the scientist who discovered it, the experiment tests the brain’s processing speed when faced with interference — or competing information.

- Is your brain easily fooled? **Hot Or Cold** shows how mixed signals can lead to some surprising sensations. Test out a thermal grill illusion to see if you experience an unexpected reaction.

- Do you feel lucky? In **Shock Or Not**, some people will get a shock when they press a button and some won’t. Depending on how your brain is wired — and influenced by your life experiences — you may be inclined to take the chance.

- Everything you smell — from roses to a skunk — sends scent molecules into the air. In **The Nose Knows**, sniff through a library of different scents and test how well your brain interprets the smells.

- Calm your brain waves to win in **Mindball**, where your ability to relax is the key to victory. The billions of neurons in your brain talk to each other through electrical pulses — brain waves that are measured in this exhibit with a technology called EEG (electroencephalography) feedback.

- Test the teamwork between your brain and body in **Balance Me**. How long can you stay on an unsteady platform before you lose your balance?

- Ever wondered how you would do when tested by a **Lie Detector**? Here’s your chance. Grab a partner and see if you can fool or will be fooled. But watch out — your brain may release cortisol when you lie, leading to physical reactions like sweating and a rapid heartbeat.
Humans have always looked for better ways to do things. **SIMPLE MACHINES AT PLAY** explores six special mechanical devices — the simple machines — that have transformed our world by letting us do more work with less effort. While simple machines are used to make work easier, in this expansive outdoor exhibit they’re the basis for play, too! You’ll climb, race, lift and slide — moving your body and engaging your mind on the way to a better understanding of these transformative inventions.

- Levers help us feel stronger by making heavy things easier to lift. How strong are you? With the **Lever Lift**, you’re strong enough to lift your friends in a giant globe! A lever is a beam that moves around a fixed point called a fulcrum. It helps move a heavy load on one end when effort is applied to the other. Test your strength by trying to lift the globe using different ropes hanging from the beam.

- In **Just Plane Zippy**, race a friend down one of two exhilarating zip lines, but don’t forget to look up. There’s a simple machine right above you — the zip line itself is an inclined plane! Usually, objects are moved up or down an inclined plane to a different elevation. Here, you are the object that is moving. How will an extra push, or applied force, affect who zips faster?

- Any ramp or slope is an inclined plane — and the greater the tilt, the faster an object moves. At **Acceleration Plane**, place weighted wheels at the top of each ramp and let go to see how gravity works against friction. Switch things up by adjusting the weights on the wheels to see if you can affect how quickly they zoom down the inclined planes.

- Can you imagine a world without wheels? Go for a spin on The **Wheel Deal** and learn firsthand how a wheel and axle makes work easier. When you apply force, a wheel rotates on an axle, reducing friction to make it easier to move an object. You couldn’t move this giant structure without this terrific twosome! Grab onto the outside or sit inside as this machine does its work.

- In **Pulley Power**, you can lift a bowling ball with ease — a feat made possible by a simple machine called a pulley. It’s just a rope looped around a wheel on an axle, but it packs a lot of power. By changing the direction of the force applied, you can lift something heavy with ease. Pull a rope to lift the bowling ball, then let it go to send a tennis ball flying into the air!

- A fork, a shovel, teeth — they’re all examples of the wedge, a triangle-shaped tool with at least one slanted side. One of the oldest simple machines, wedges help you lift or separate objects with less effort. In **Wedge It**, you can use one kind of wedge (your hands and feet) to scamper up a wedge-shaped climbing wall.

- Slide down the ridges — or threads — of a screw in the **Screw Slider**. You can rotate the threads in a screw to hold objects together, or twist them to lift materials out of the ground. A screw’s power depends on how close together the threads are. The closer the threads, the easier it is to turn. How quickly and easily can you turn yourself down the slide?

- Ready for an adventure? Scale the massive, three-story tall **Luckey Climber** to get a bird’s-eye view of the simple machines in the exhibit. It’s a climber and sculpture in one — there’s nothing else like it in Kansas City!
Water feels ordinary to us because it’s so familiar, but it’s a truly extraordinary molecule. EVERY LAST DROP explores water and our relationship to it.

In *What Is Water?*, dive into the fascinating scientific properties of H₂O:
- Splash and learn at two activity-packed Water Tables. Use tabs to direct the flow of water, turn a water wheel, overflow a tipping cylinder, toss balls into a water vortex and more!
- Make water move uphill with an Archimedes Screw. One of the oldest architectural tools, it helps H₂O defy gravity.
- Look up! The lights above the exhibit have a story to tell. They’re models of Suspended Water Molecules, and they reflect the physical states of the three phases of water.
- In this exhibit, you’ll even learn from what you sit on. The Water Is Life Benches share simple but surprising facts about the world of water.
- Ice, liquid or vapor — water is a beautiful, captivating wonder. Investigate the Phases of Water through three interactive touchscreens.

In *Tapped Out*, learn more about how we use water and why we should conserve it:
- Learn more about Rain Barrels and how they help conserve water. (Though this is probably the only one filled by a Floating Faucet.)
- The Tapped Out Room is a visual masterpiece with stunning images and interesting stories.
  - From individual efforts like the Life Straw to massive projects like the Colorado River revitalization, learn more about innovative H₂O Engineered solutions.
  - While 70% of the Earth’s surface is water, less than 1% is available for human consumption. Explore How We Use Water, from drinking to “hidden water” in food and manufacturing.
  - Most of us have never been really thirsty, but it’s different in other parts of Our Tapped Out World. Learn more about water scarcity and the organizations working to help.

Explore the interaction between Water & Life, from watersheds to water treatment:
- At Cleaning Our Water, pump water, press levers and turn basins at the interactive water treatment wall. Follow the process to understand where you get your water — and where it goes after you use it.
- A river runs through the exhibit and some of it comes to life. Step on the Projected River to make waves and chase fish.
- Learn more about the world’s River Cities, get tips on how to Clean Up Our Rivers and read how Kansas City’s Great Flood of 1903 affected Union Station.
- Have you ever walked through a cloud? At the Cloud Fall, you’ll learn that water is in the air all around you — and experience it for yourself.
- In Exploring an Aquifer, go deep in the earth where groundwater is found. Illuminate how water levels have changed over the years and see how much an aquifer refills when it rains.
- When Stormwater streams into our storm sewers after a heavy rain, where does it end up? Learn more about Kansas City’s approach to keeping our water clean.
- Sculpt your own landscape on the Interactive Sand Table, make it rain and watch water flow through mountains and valleys. It’s all under your control in this augmented reality exhibit.
You are 99.9% identical to the person standing next to you. **GENETICS: UNLOCK THE CODE** helps visitors discover the science and wonder behind that fraction of a percentage point.

• **At the DNA Dance-Off**, hop on an interactive floor to make keratin DNA. See the code — and your results — on a massive LED wall. Compete with others or challenge yourself in the world’s first genetic dance-off.

• Copy yourself in the **Duplication Station** — a photo booth with a twist. How will you interact with your group of clones?

• What would you look like with black curly hair and dimples? **Try-a-Trait** is an augmented reality experience that lets you explore what you’d look like with different inherited traits.

• Test your knowledge in the **Genetics Quiz**, using body motion to select answers.

• In **Genes and You**, an interactive book tells the amazing story of you. Flip the pages and watch the story unfold on the screen in front of you.

• Stick out your tongue, smile and check your earlobes and hairline at the **Trait Tree**. Follow the directions to discover how many share your traits.

• **DNA’s Double Helix** — the most recognizable symbol in genetics — has a starring role, at the entrance and unwinding throughout the exhibit.

• **Walk under the giant, lighted Chromosome 17**. Each chromosome contains thousands of our genes; learn about some of them here.

• Explore the visual world of genetics at the **Spin Browser**. Spin the dial to speed up or slow down videos of DNA, mitosis, twins and more.

• From regenerating worms to birds that can’t sing, learn crazy but true facts about animal genetics in **Genetics in the Wild**.

• We share 99.9% of our genetic code with other humans. But we also share 85% with cows. At **Genes in Common**, guess how much we are like other species.

• A baby gets half its chromosomes from its mother and half from its father. So is it a boy or a girl? Make a prediction and press a pop-o-matic dome to explore a **Matter of Chance**.

• Will you **Find Your Future** in genetics? Investigate jobs by watching videos of young professionals to guess their careers.

• Explore a geneticist’s **Picture of Us** — the karyotype — and take a closer look at six genetic conditions.

• How can a genetic condition make **One Big Impact** on muscle strength? Lift two backpacks to see the difference. In **Muscle Bound**, twist a cylinder to show the science behind the change.

• Read the stories on the **Just Like You** column to better understand a day in the life of local young people with Down syndrome, sickle cell disease, hemophilia and cystic fibrosis.

• Genetics is a small, small world. Peer into digital **Microscopes** to explore chromosomes, blood cells, muscle fibers and more.

• Your body has more than 37 trillion cells, and each one has everything needed to copy itself. Learn all about **What’s Inside Our Cells**.
The SCIENCE OF ENERGY FEATURING UNPLUGGED explores energy and our relationship with it. Through interactive discovery, you’ll earn a better understanding of where energy comes from, with an emphasis on renewable sources. Build on the basics to understand humankind’s impact on energy resources and explore a global perspective into the world’s relationship with energy, now and in the future.

- Hop on the **Power Wheel** to harness your own human energy and generate electricity. Step onto the giant wheel and get walking to light up an Unplugged sign while a digital display tracks speed, distance, calories burned and watts of energy generated.

- Demonstrate how the body is an energy-generating machine with the **Bicycle Generators**. Jump on a stationary bicycle and pedal away, transferring the energy from food into motion. That motion, in turn, generates electricity that powers up small electronics relevant to your life.

- The **Electric Hand Crank Generator** explores the machines that turn energy into electricity. Turn the crank to power up lights and a fan, getting an inside look at a generator that uses conductive wires spinning through a magnetic field.

- At the **Wind and Solar Impact Table**, learn more about wind and solar power and the role of each in our energy mix. By turning up the wind to activate turbines, adjusting sunlight levels and changing the angle on solar panels, you can influence the energy generation of a model city.

- The **Turbine Display** tells more about wind as an energy source, from its use by our ancestors to its practical applications today. A digital display offers interesting content while a massive turbine blade display offers a real-world perspective.

- The **Solar Panel Display** highlights the potential of the sun to help meet our energy needs. Get an up-close view of a solar panel, used all over the world to harness the sun's energy on homes, businesses and even street signs.

- At the **Energy Spectrum Wall**, get a straightforward but comprehensive look at where we get our energy, from nonrenewable fossil fuels like coal and gas to renewable sources like wind and hydro.

- The **Imagine Energy Digital Wall** is a giant, interactive touchscreen with a world of information about energy — history, science, global perspective, future, careers and opportunities. Navigate tabs to reveal information, images and video within a dynamic framework:
  - **The Timeline** offers a historical perspective of humankind’s relationship with energy, beginning with the control of fire and continuing through today’s exploration of renewable energy sources.
  - **The Science** is a foundational presence for the entire exhibition, offering information on core terminology and landmark discoveries.
  - **Global View** uses an interactive map to offer a comprehensive perspective on energy, instantly identifying countries that are power players in energy production and consumption.
  - **The Future** offers a glimpse of technologies that may shape tomorrow’s energy world and a fuller understanding of why this research is so vital.
SCIENCE ON A SPHERE offers a world’s worth of information — literally! This room-sized, global display system uses computers and video projectors to display planetary data on a 6-foot-diameter sphere. Science on a Sphere was developed by the researchers at the National Oceanic and Atmospheric Administration (NOAA) to help illustrate earth system science for people of all ages.

Using NOAA’s collective experience and knowledge of the Earth’s land, oceans and atmosphere, this exhibit offers captivating lessons on environmental processes. With 360-degree projections, the globe becomes the blue marble of Earth with more than 300 data sets that display weather patterns, tectonic shifts and other geophysical phenomena.

It’s a visualization tool that gives you a completely new perspective. With one touch, you can see all the way to the bottom of the ocean where the Titanic sits, the 2011 earthquake in Japan and spreading tsunami, or actual satellite images of our planet taken as recently as two hours before.
The **BURNS & McDonnell Engineerium** provides a deep dive into hands-on learning, encouraging kids to consider careers in technology and engineering. Since 2008, the Engineerium has reached thousands of kids who have participated in programs devoted to robotics, computing and sustainability. Relevant, interactive programming appeals to a wide age range with topics such as Robotics 101, LEGO Robot Challenge, Smart Robots and Renewable Wind.

The Engineerium also offers hands-on STEM learning activities that provide scientific and educational content related to touring exhibits at Union Station.

It's a venue that provides ample space for Science City's commitment to daily science demonstrations and weekend workshops. Free 20-minute Saturday Walk-Up workshops include Food Science in the Kitchen, Making Magic in the Maker Studio, and Builder Wars with LEGO®s. Saturday Science Labs offer the chance to assist in the dissection of a pig heart or cow eyeball.
